SECTION X

OBSERVATIONS ON THE OCCURRENCE OF MALARIA IN SHIPS.

There were no cases of malaria brought to notice in ships arriving at Plymouth during the year.

SECTION XI

MEASURES TAKEN AGAINST SHIPS INFECTED WITH OR SUSPECTED FOR PLAGUE

No plague infected or suspected ships entered the Port during the year.

SECTION XII

MEASURES TAKEN AGAINST RODENTS IN SHIPS FROM FOREIGN PORTS

- (1) All ships arriving at the various wharves are boarded by the Port Health Inspector or Rodent Operator. Enquiries are made of the officers and crew as to evidence of rat infestation. Docksidings, wharves and warehouses in dock areas are under constant surveillance for evidence of rodent infestation, and Foreman Stevedores are also questioned as to the presence of rats. Where evidence of rat infestation is found, trapping or poisoning is carried out by the Rodent Operator.
- (2) All rats caught are destroyed and some specimens found are submitted to the Public Health Laboratory, South Devon and East Cornwall Hospital, Greenbank, Plymouth.
- (3) If necessary, derothing of ships is carried out by fumigation with hydrocyanic acid gas. These fumigations are carried out by private firms under the supervision of the Port Health Authority.

The names of Commercial Contractors who have carried out the fumigation of vessels at this Port are:-

1. Fumigation Services Ltd., Barking, Essex.
2. London Fumigation Co., London, E.C.3.

Small infestations are dealt with by the Port Health Authority's Rodent Operator, using "Warfarin".

Observations confirm that rat-proofing principles are adopted in construction of all new vessels inspected.

PUBLIC HEALTH (SMELL-FISH) REGULATIONS, 1938-1948.

During the year the Saltash Borough Council converted a waterside building into an oyster cleansing station in an attempt to re-open a local industry which had been closed for many years. The cleansing station consisted of 6 tanks of approximately 1,000 gallons capacity and a water sterilizing and aerating unit. Water sterilisation is by means of an ultra-violet lamp.

The plant was approved by the Ministry of Agriculture, Fisheries and Food and following extensive tests, approval was given for oyster fishing in certain restricted areas of the rivers Tamar and Lynher and the Prohibition Order made by the Plymouth Port Health Authority on 4th October, 1957 was varied accordingly on 1st August, 1966.

Six local fishermen were licensed to dredge in the area for oysters, control of purification and subsequent marketing being retained by the Saltash Borough Council through the Superintendent of the oyster cleansing station.

After operating for some 10 days the marketing of oysters was stopped following reports of oyster consumption causing sickness. Extensive investigations have since been carried out to detect the bacteriological or mineral cause of the sickness, but no likely cause has come to light.
